Information Flow Between Business Organizations

This section describes the information flows between key business organizations.

Selection of the specific cross-business organization flows was subject to the following rules:

- Information flows that cross business organizations in the supply-chain business process
- Information flows that cross business organizations in the order-to-fulfillment business process
- <Add any other criteria here>

Process	Source Business Organization	Destination Business Organization	Business Object Transferred	Information Medium	Event	Frequency	Projected Volume

Cross-Business Organization Information Flow Diagrams

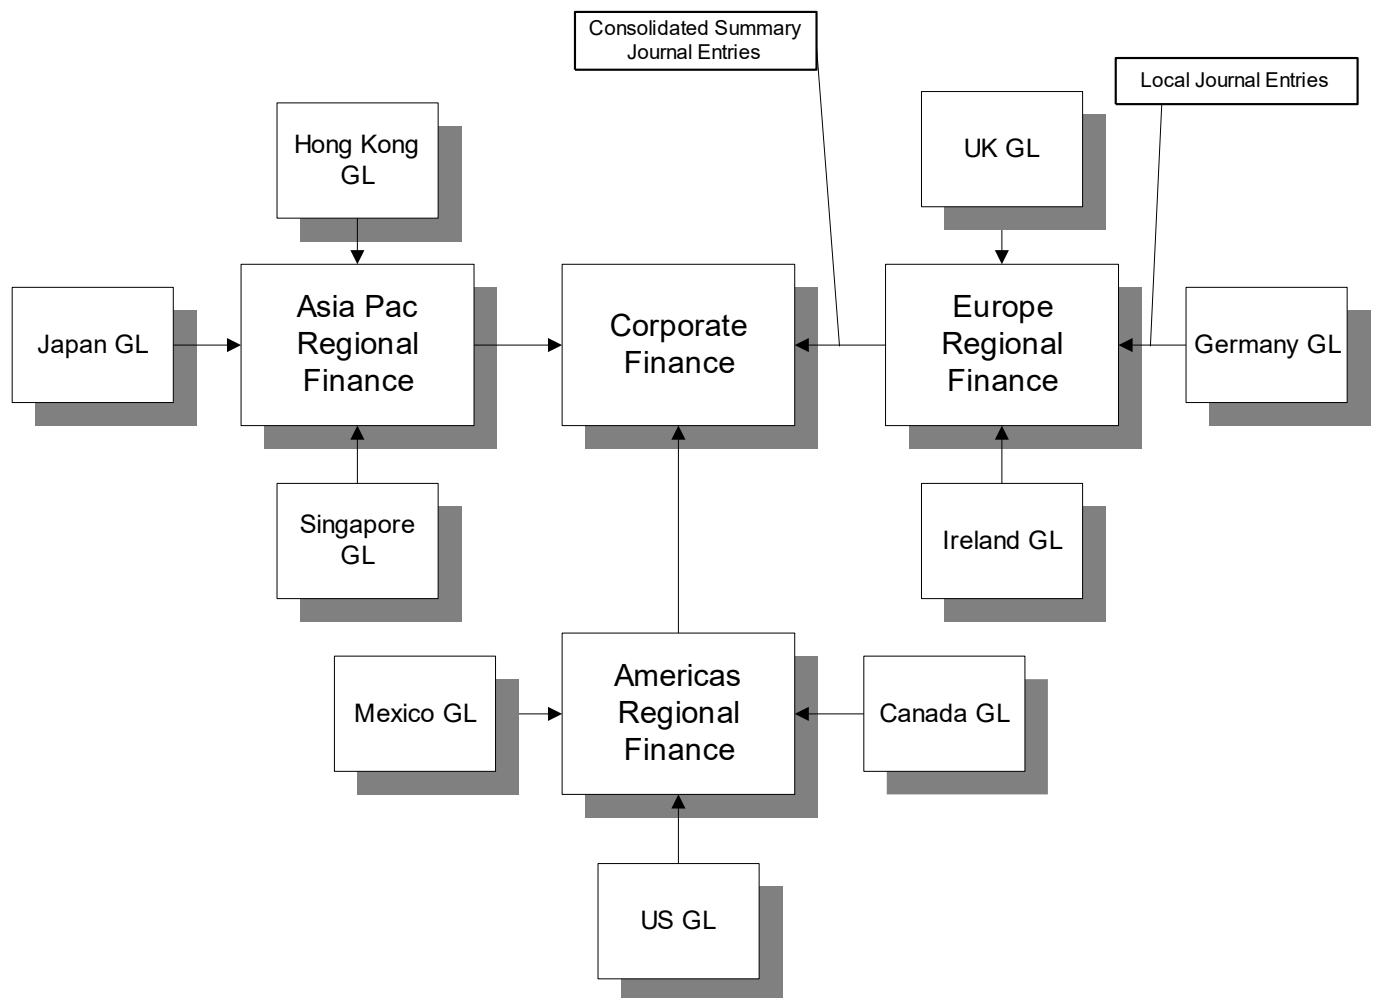

Included are diagrams for the following cross-organizational business processes as information flows:

General Ledger Period Close

- Manufacturing and Distribution
- <Add any other business processes here>

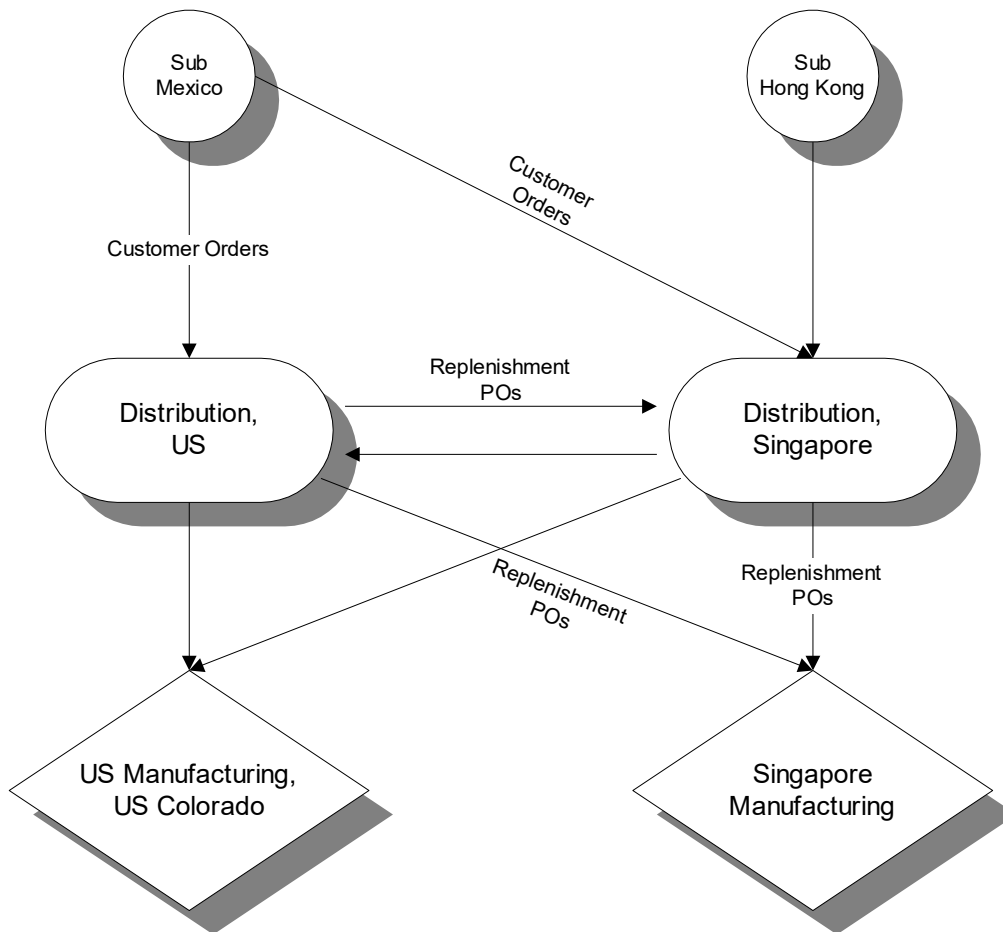

General Ledger Period Close

The diagram below shows the information flows between the finance organizations for the period close process.

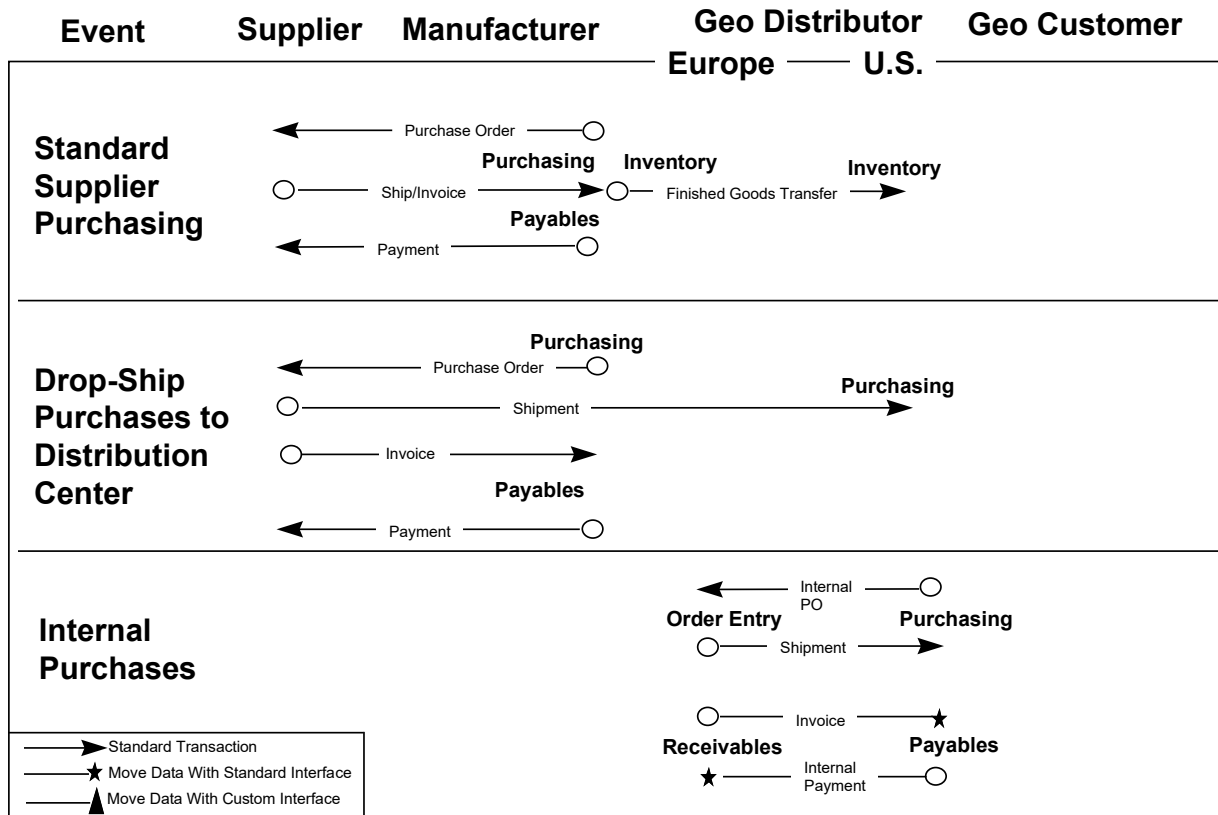

Manufacturing and Distribution

The diagram below shows the information flows between the supply chain organizations for the order fulfillment process.

Centralized Model
Baseline One - Total Order Shipped From One Distribution Center

Information Flow Between Applications

Cross-Application Flows

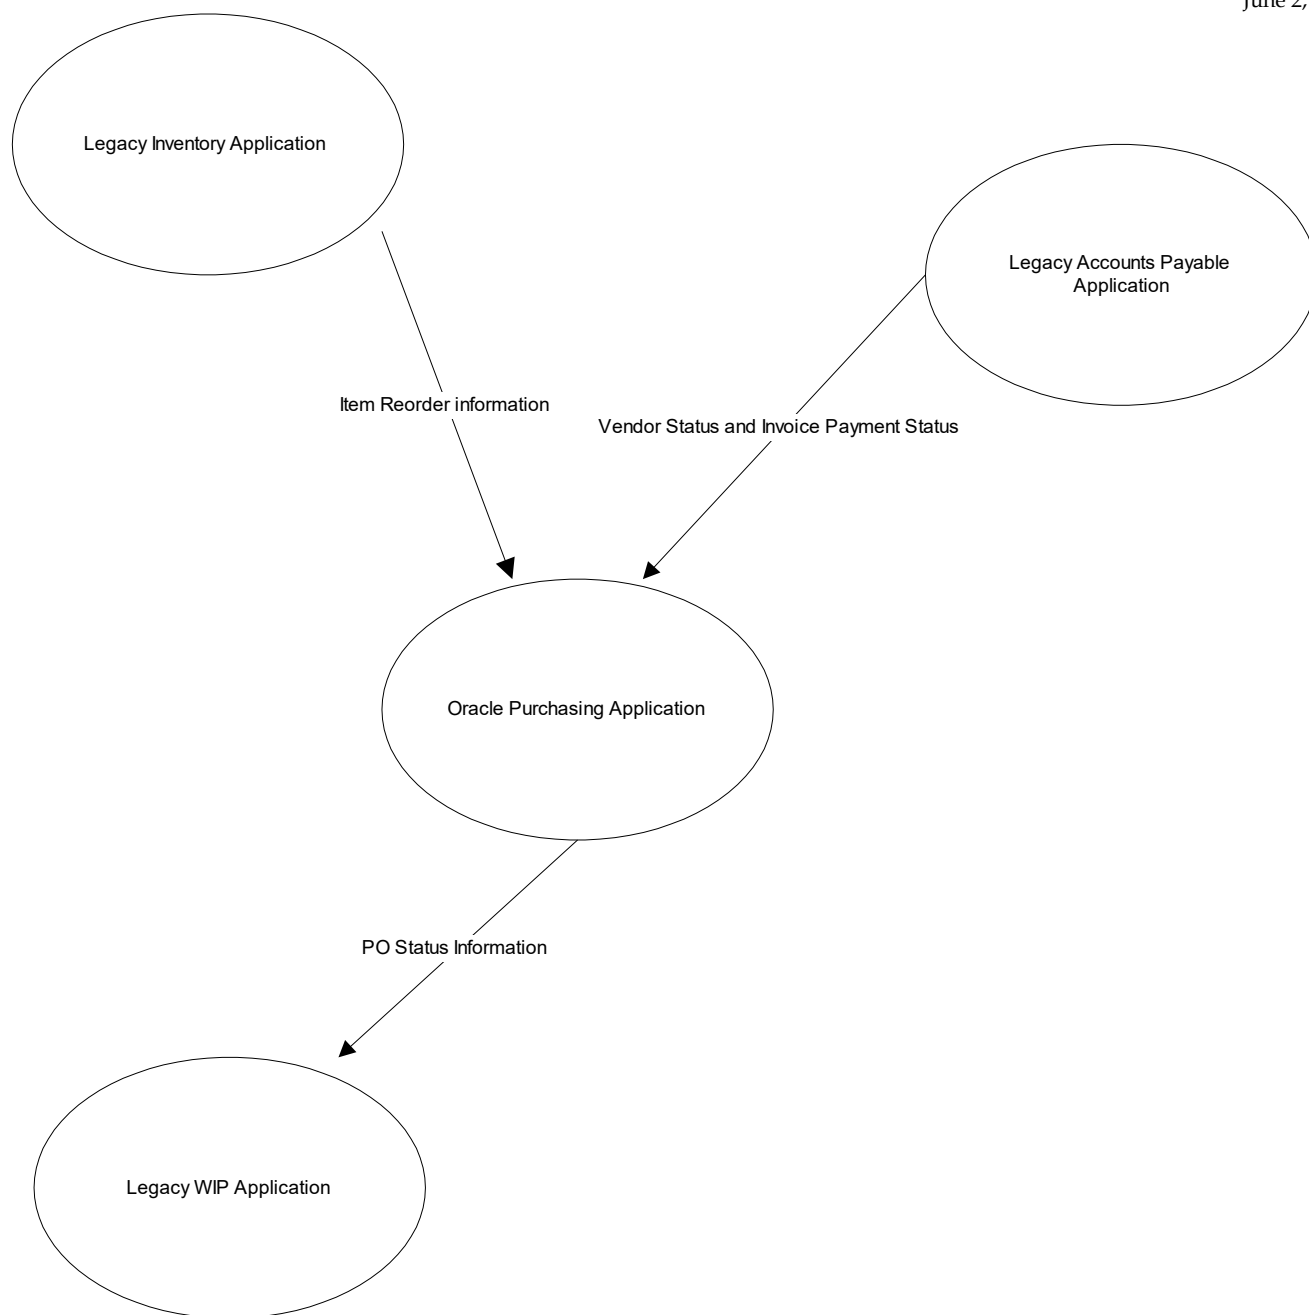

This section describes the information flows between different business applications.

Selection of the specific cross-business function flows was subject to the following rules:

- All information flows that flow across the external application integration points
- <Add any other criteria here>

Process	Source Application	Destination Application	Business Objects Transferred	Information Medium	Event	Frequency	Projected Volume

Cross-Application Information Flow Diagrams

Information Flows Across Data Centers (Installations)

This section describes the information flows between different applications installed in different data centers. Selection of the specific cross-data center flows was subject to the following rules:

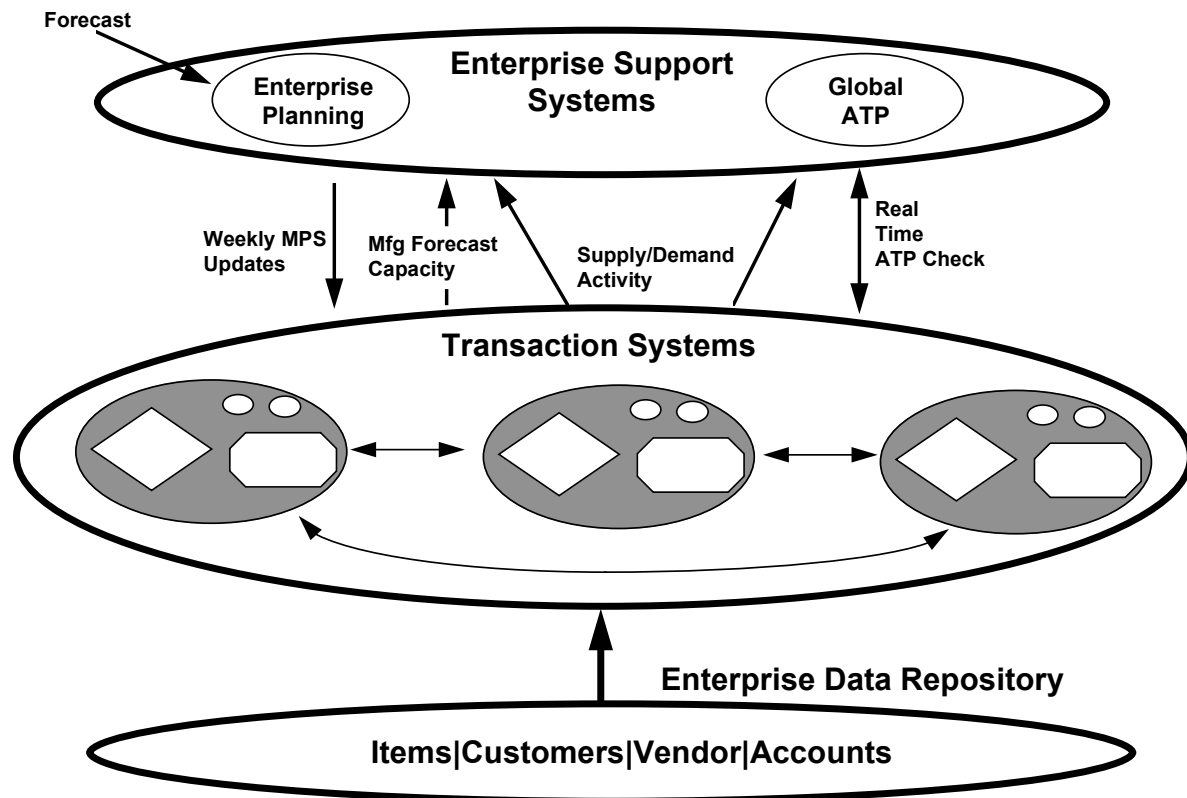

- Information flows between installations of the same application in different data centers (flows between distributed databases)
- Information flows between installations of different applications in different data centers
- <Add other criteria here>

Process	Source Application	Destination Application	Business Objects Transferred	Information Medium	Event	Frequency	Projected Volume

Cross-Data Center Information Flow Diagrams

Business Organizations

The list below is the business organizations analyzed in this document.

Business Organization	Abbr.	Application Setup Parameter	Business Functions

Security Policies and Requirements

Security Policies

This section discusses the security policies that are in effect for the ...

Security Policies and Requirements

This section expands on the policies in the prior section to describe the detailed security requirements.

Business Function	Business Object	Requirement
General Ledger	Corporate journal information	Restrict read/transaction access to Corporate GL data to corporate finance users only.
	Legal entity journal entries	Restrict read/transaction access to GL entries by legal entity. Corporate finance users can read/transact any data.
	Legal entity journal entries	Corporate finance users must be able to consolidate the journal entries for the individual legal entities for reporting purposes.
Accounts Payable	AP Vouchers	Restrict read/transaction access to AP Vouchers by revenue entity. Corporate finance users can read/transact any data.
	AP Checks	Restrict read/transaction access to AP Checks by revenue entity. Corporate finance users can read/transact any data.
	AP Banks	Restrict read/transaction access to AP Banks by revenue entity. Corporate finance users can read/transact any data.
Fixed Assets	Assets	Restrict read/transaction access to Assets by revenue entity. Corporate finance users can read/transact any data.

Organizational Information Access Analysis

This section describes the analysis of the requirements for the business organization's information access. It describes the ability of an organization to create, change, read, or delete information of any type.

The organization information access table summarizes this analysis. In the table, each cell represents the ability of the organization to **Create**, **Read**, **Update**, and **Delete** each of the business objects in the table. The table lists all the key business objects and shows how organizations access each one. Cells in the table can be empty, meaning the organization does not access the business object at all, or they can hold the initial letters of the following terms:

- **Create:** This means that the organization can create a business object of this type.
- **Read:** This means that the organization can read a business object of this type.
- **Update:** This means that the organization can update a business object of this type.
- **Delete:** This means that the organization can delete a business object of this type.

Business Object	Org 1	Org 2	Org 3	Org 4	Org 5	Org 6	Org 7

Inter-Organizational Information Access Analysis

This section provides more detail about information access requirements between organizations. Inter-Organization Information Access tables will include further detail.

Each key business object has a separate table that shows how a "Consumer" organization can access a business object created by the 'Creator' organization.

The business objects in this analysis are:

- Chart of Accounts
- Bill of Materials
- Sales Order

Chart of Accounts

Chart of Accounts Creator	Consumer			
	Org 1	Org 2	Org 3	Org 4
Org 1	RUD	R	R	R
Org 2				
Org 3				
Org 4				

Bill of Materials

BOM Creator	Consumer			
	Org 1	Org 2	Org 3	Org 4
Org 1	RUD	R	R	R
Org 2	R	RUD	R	R
Org 3	R	R	RUD	R
Org 4	R	R	R	RUD
