Bill of Material for Cost Setup/CST: Define Overhead Sub-Elements

Cost>Setup>Sub-Elements>Overheads

<Customer Short Name> Process: <Process Name>	Business Area: <Business Area>	Date: <Date>
Control Number: <Control Number>	Priority(H, M, L): <Priority (H, M, L)>	Process Owner: <Process Owner>

Description: Use this form to define Overhead Costs.

You can use material Overhead and Overhead Cost Sub-Elements to add indirect costs to item costs on either a percentage basis or as a fixed amount in both standard and average costing organizations. Each overhead Sub-Element has a default basis, a default activity, and an absorption account. The overhead absorption account offsets the corresponding overhead cost pool in the general ledger.

You can base the overhead charge on the number of resource units or percentage of resource value earned in the routing operation, or you can set up move-based overheads where the rate or amount is charged for each item moved in an operation. To do this, use the Item or Lot basis types.

You can base the material overhead charge on a percentage of the total value, which is earned when you receive purchase orders or perform WIP completion transactions, or you can use the Item or Lot basis types.

You can apply each of these Sub-Elements using different basis types for increased flexibility. Material overhead is earned when an item is received into inventory or completed from work in process. Overhead, based upon resources, is earned as the assembly moves through operations in work in process.

WIP for Cost Setup/CST: Define Repetitive Line/Assembly Association

<Customer Short Name> Process: <Process Name>	Business Area: <Business Area>	Date: <Date>
Control Number: <Control Number>	Priority(H, M, L): <Priority (H, M, L)>	Process Owner: <Process Owner>

Description: Use this form to Define Repetitive Line/ Assembly Association.

WIP for Cost Setup/CST: Define Production Lines

WIP>Repetitive>Production Lines

<Customer Short Name> Process: <Process Name>	Business Area: <Business Area>	Date: <Date>
Control Number: <Control Number>	Priority(H, M, L): <Priority (H, M, L)>	Process Owner: <Process Owner>

Description: Use this form to define the Production Lines. You can define and update, but not delete Production Lines. A production line describes a unique set of operations, departments, and/or manufacturing cells that produce one or more of your products. You can associate Production Lines with repetitive assemblies, discrete jobs, and work order-less completions.
