---

## Introduction

---

### Purpose

The purpose of **Performance Test Scenarios** is to describe the performance test scenarios that we will simulate in the system performance test of the <Project Name> project. This document defines the scenarios related to <Subject>. Each scenario is a point-in-time snapshot of the production processing environment that will generally include users working in multiple business processes and applications, with a mixture of online and batch processing. This scenario list will provide the context for the transactions and test scripts identified and documented in subsequent tasks.

Preparation of the performance test scenario list included gathering the performance concerns of the separate functional teams, and analyzing the performance test scope, objectives, and the projected business volumes in the new system.

---

### Sources

Preparation of this **Performance Test Scenarios** document included input from the following sources:

- PJM.CR.010 - Project Management Plan [initial complete], produced in task PJM.CR.030
- PT.010 - Performance Testing Strategy
- RD.030 - Process and Mapping Summary
- RD.040 - Business Volumes and Metrics

## Test Scenario Descriptions

This section describes the performance test scenarios for simulation during the performance testing in the <Project Name> project.

Each test scenario described below is subject to decomposition into the component business functions that are active at that point in the business cycle. For testing purposes, the collection of these functions equates to the sum total of all processing being performed on the system at the time of the scenario. For some scenarios, particularly those that include online processing, it is impractical to include all functions that could *possibly* be happening on the system. In these cases, the scenario representation as a set of business functions will be an approximation. Consequently, inclusions of only the most intensive or performance-critical business functions will be included.

### Test Scenario 1 - <Performance Test Scenario Name>

This scenario occurs...<describe scenario>

The online processing that occurs during the scenario includes:

- Order Administration, with 50% of sales orders being entered from telesales and resellers
- 
- 
- 

The batch processing that occurs during the scenario includes:

- 
- 
- 

For the purposes of performance testing, the scenario equates to the sum total of a number of active business functions. The business functions assumed to be active in the test scenario are the Test Business Functions. One or more Business Function Roles perform these Test Business Functions.

| Test Business Function | Function Type | Business Function Role | Current # of Users | # of Users as of <Business Metrics Date> |
|------------------------|---------------|------------------------|--------------------|------------------------------------------|
| Order Entry            | Online        | Order Administrator    | 53                 | 70                                       |
|                        |               |                        |                    |                                          |
|                        |               |                        |                    |                                          |
|                        |               |                        |                    |                                          |
|                        |               |                        |                    |                                          |
|                        |               |                        |                    |                                          |
|                        |               |                        |                    |                                          |

## Business Metrics

This section details the business metrics that affect the load during the performance test. The user counts and transaction rate metrics are representative of the system usage by the various users as of <Business Metrics Date>.

### Test Scenario 1 - <Performance Test Scenario Name>

| Test Business Function | Business Metric            | # of Users | Rate                         | Comments                            |
|------------------------|----------------------------|------------|------------------------------|-------------------------------------|
| Order Entry            | 1400 new orders in 5 hours | 70         | 1 order per user per 15 mins | Assuming 10% growth in sales orders |
|                        |                            |            |                              |                                     |
|                        |                            |            |                              |                                     |
|                        |                            |            |                              |                                     |
|                        |                            |            |                              |                                     |
|                        |                            |            |                              |                                     |
|                        |                            |            |                              |                                     |
|                        |                            |            |                              |                                     |
|                        |                            |            |                              |                                     |
|                        |                            |            |                              |                                     |
|                        |                            |            |                              |                                     |

---

## Assumptions

This section discusses any assumptions made in drawing up the list of performance test scenarios.

- 1.
  - 2.
  - 3.
-

---

## Risks

The following list is a summary of the risks inherent in the approach taken in the selection of the performance test scenarios:

- 1.
- 2.
- 3.

The representation of the performance test scenarios listed here are approximate, since it is impossible to exactly simulate all the complex interactions and processing that takes place in a production ERP system. There are inherent risks in the interpretation of the results from a performance test that only includes a subset of the processing that actually occurs in a particular situation. The limited range of transactions and business processes included in the scenarios may not sample all processes currently recognized to create a large performance overhead. In addition, the test may not include processes subsequently found to be of sufficient concern to warrant their inclusion in such a test.

Resource and time limitations dictate inclusion of only a small number of scenarios in the performance tests. Expectations are that the selected performance tests will provide coverage to at least some of the performance concerns and quality issues of the <Project Name> project. This does not represent a complete list of situations in which the combined processing of the separate users and batch processes create a usual load on the hardware. Nor does this list assume that there are not other scenarios worthy of performance testing, given sufficient resources and time.

## Open and Closed Issues for this Deliverable

### Open Issues

| ID | Issue | Resolution | Responsibility | Target Date | Impact Date |
|----|-------|------------|----------------|-------------|-------------|
|    |       |            |                |             |             |
|    |       |            |                |             |             |
|    |       |            |                |             |             |
|    |       |            |                |             |             |

### Closed Issues

| ID | Issue | Resolution | Responsibility | Target Date | Impact Date |
|----|-------|------------|----------------|-------------|-------------|
|    |       |            |                |             |             |
|    |       |            |                |             |             |
|    |       |            |                |             |             |
|    |       |            |                |             |             |
