Introduction

Purpose

This document provides the standards to be followed for the conversion process.

Audience

The primary audience for this document is as follows:

-
-
-

Century Date Compliance

In the past, two character date coding was an acceptable convention due to perceived costs associated with the additional disk and memory storage requirements of full four character date encoding. As the year 2000 approached, it became evident that a full four character coding scheme was more appropriate.

In the context of the Application Implementation Method (AIM), the convention Century Date or C/Date support rather than Year2000 or Y2K support is used. Coding for any future Century Date is now considered the modern business and technical convention.

Every applications implementation team needs to consider the impact of the century date on their implementation project. As part of the implementation effort, all customizations, legacy data conversions, and custom interfaces need to be reviewed for Century Date compliance.

Conversion Standards for Legacy Systems

The following standards should be followed when creating programs and scripts in the legacy system.

Following is an explanation of the file structure and file naming conventions for each of the legacy systems being converted to Oracle.

Legacy System	File Name	File Location	Business Object	File Name

Conversion Standards for Target Systems

The following standards should be followed when creating programs and scripts in the target system.

Following is a description of the file structure for the conversion environment:

Target Oracle Application	File Name	File Location	Business Object	File Name	Conversion Tasks

Conversion Standards for Automated Tools

<Automated Conversion Tool> Template and Mapping Standards

Below is a description of the <Automated Conversion Tool> file structure and file naming conventions:

Oracle Application	Business Object	<Automated Tool> Template File Name	<Automated Tool> Mapping File Name

<Automated Conversion Tool> Mapping Standards

Below is a description of the <Automated Conversion Tool> file structure and file naming conventions:

Oracle Application	Business Object	<Automated Tool> File Name

Conversion Standards for Conversion Deliverables

Follow the conversion deliverable standards when developing your conversion deliverable documents. The file name and directory location are listed for each deliverable.

Overall Deliverable Standards

Microsoft Word Standards

Microsoft Excel Standards

Task	Business Object	File Name	Directory Location

Open and Closed Issues for this Deliverable

Open Issues

ID	Issue	Resolution	Responsibility	Target Date	Impact Date

Closed Issues

ID	Issue	Resolution	Responsibility	Target Date	Impact Date
