Introduction

Purpose

The Conversion Data Mapping document describes the:

- detailed data mapping from the source legacy system to the <Target Application> for <Business Object Name>
- file layout to be used for extraction of the data from the source system

Background

The information in this document has been defined as the result of discussions between project staff, <Company Short Name> technical staff, and <Consulting Services Provider> consultants.

Scope and Application

The Conversion Data Mapping identifies for use in designing conversion programs to convert <Business Object Name>:

- data sources
- target tables and columns
- validation
- processing
- translation
- filter
- foreign key rules

Audience

This document is intended for the following individuals:

- <Company Short Name> conversion project staff
- outside consultants
- reviewers of data conversion deliverables

Application Business Object Reference Information

In each of the following sections, a table maps the business objects for <Target Application> to the Oracle Application tables. The foreign key relationships between the Oracle Application tables are also indicated. Column (2) suggests whether the business object is a candidate for programmatic conversion. In column (4), the standard Oracle interface is documented if one exists for facilitating the conversion of a specific business object.

Business Object	Man/ Prog	Owned By	Open Interface	Production Table Name(s)	Foreign Key Table Name(s)
Setup Business Object					
Period Types	M	GL		gl_period_types	none
Calendar Types	M	GL		gl_period_sets, gl_periods	none ----- gl_period_sets, gl_period_types
Set of Books	M	GL		gl_set_of_books	fnd_currencies, gl_code_combinations, gl_period_types, gl_period_sets
Transaction Entities					
Enter Journals		GL	Journal Import gl_interface	gl_je_batches, gl_je_headers, gl_je_lines	fnd_concurrent_requests, gl_sets_of_books ----- fnd_currencies, gl_budget_versions, gl_daily_conversion_types, gl_encumbrance_types, gl_je_batches, gl_je_categories, gl_je_headers, gl_je_sources, gl_recurring_headers ----- gl_code_combinations, gl_je_headers, gl_sets_of_books

Conversion Mapping - <Business Object Name>

Below is a table mapping the legacy data elements to the Oracle tables and columns.
The following processing ID codes are used in the mapping spreadsheet:

<Business Object Abbreviation>PR = Processing Rule

<Business Object Abbreviation>TR = Translation Rule

<Business Object Abbreviation>FR = Filter Rule

<Business Object Abbreviation>FKR = Foreign Key Rule

<Business Object Abbreviation>DR = Derivation Rule

<Business Object Abbreviation>DV = Default Value Rule

Target Application: <Target Application>

Business Object : <Business Object Name>

Prepared by:

(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
Ref.#	Target Application Table	Target Application Table Column	Target Column Datatype	Not Null?	Source System File Name	Source System Field Name	Source System Field Datatype	Default Value	Validation	Rule #

Extract File Layout

Below is a table documenting the extract file schema.

Datafile	Field Name	Datatype	Position: From	Position: To	Oracle Table	Oracle Column	Comments

Data Clean-up

Below is a description of the data clean-up efforts required for the conversion of
<Business Object To Be Converted>:

Data Normalization

Below is a description of the data normalization that will occur for the conversion of
<Business Object To Be Converted>:
